Excerpted from the article

In an effort to understand the effects of COVID-19 on child care programs and early educators throughout California, the Center for the Study of Child Care Employment (CSCCE) conducted a brief survey of licensed child care centers and licensed family child care programs in the state. More than 2,000 programs responded to this survey from April 13-30, 2020: 34 percent of survey respondents are centers, and 66 percent are family child care programs. Many of these programs remain open: 34 percent of centers indicated that they are currently open, and 72 percent of family child care programs are open.
