CAREC Post Conference Theme

What is ECE for? Rethinking the Canadian Dialogue

The field of Early Childhood Education is always shifting and considering new interpretations of the world. Taken-for-granted narratives related to policy, research, and practice requires constant critique, critical reflections and conversations so that counter-narratives and counterviews can also be considered. It is through this process of *listening* and *provocation* that early childhood education policy, research, and practice can be imagined, re-imagined, and imagined again.
